

TABLE OF CONTENTS

Introduction	11
1. General model of the Earth remote sensing	14
1.1. Remote sensing as a basis for the study of natural objects, processes and phenomena	14
1.1.1. Thematic tasks of remote sensing	15
1.1.2. Aerospace imaging complex	16
1.2. Carriers of aerospace imaging apparatus.....	17
1.2.1. Aircraft units.....	17
1.2.2. The orbits of spacecrafts	24
1.2.3. The type of spacecraft units	29
1.2.4. Earth resource satellite	34
1.2.5. Spacecraft, orbit station.....	59
1.3. Aerospace imaging system	66
1.3.1. The spectral bands.....	67
1.3.2. General characteristic of imaging systems.....	68
1.3.3. Classification of imaging systems	71
Questions.....	73
2. Linear spatial-frequency model of imaging systems	74
2.1. Structural scheme of the transmitting complex. The principles of image formation ...	74
2.2. Transmitting properties of imaging systems.....	77
2.3. The concept of spatial harmonics	80
2.4. Space-frequency transfer functions of imaging systems	85
Questions	87
3. Imaging systems with simultaneous creation and recording (photographic)	88
3.1. Optical bases of image creation.....	88
3.1.1. The main characteristics of the optical system.....	88
3.1.2. Light distributions of optical system.....	93
3.1.3. Image shift. Shift compensators	95
3.1.4. A resolution of aerial camera lens	96
3.1.5. The optical transfer function of aerial camera lens.....	100
3.2. Classification and construction of aerial cameras and space cameras.....	104
Questions	110
4. Sensors of photographic imaging systems	111
4.1. Structure of photoemulsion layer. Structure of the black-and-white photomaterials	111
4.2. Sensibilization. Sensibilizative photomaterials	113
4.3. Color and spectrozonal photomaterials	116
4.3.1. Additive and subtractive color synthesis.....	116

4.3.2. The structure of color and spectrozonal photo materials	119
4.4. Multispectral photography.....	125
Questions	129
5. Metrology of aerospace images	130
5.1. Sensitometry	130
5.1.1. The essence of sensitometric tests.....	130
5.1.2. Characteristic curve and sensitometric characteristics of aerial films.....	132
5.1.3. Sensitometric systems	135
5.1.4. Sensitometry of color photomaterials	137
5.1.5. Determination of spectral sensitivity of aerial films	139
5.2. Structuremetry (Structure measuring)	142
5.2.1. Structural properties of photographic materials	142
5.2.2. Characteristics of sharpness of aerial films	143
5.2.3. Resolution of aerial images.....	144
5.2.4. Modulation transfer function of aerophotomaterials.....	148
5.2.5. Resolution determination of photographic system.....	151
5.3. Approximate method for determining the modulation transfer function of imaging system.....	152
Questions	155
6. Imaging systems with simultaneous creation and nonsimultaneous record (television and optical-electronic)	156
6.1. Television imaging systems.....	156
6.1.1. Structural schemes of television imaging systems	156
6.1.2. Types of television imaging systems.....	158
6.2. The digital image forming principle of optical-electronic systems	160
6.2.1. The general scheme of image formation	160
6.2.2. Structural scheme of the CCD element.....	162
6.2.3. Architecture of CCD matrix	165
6.2.4. Creation of color image in CCD matrix.....	168
6.3. Radiometric quality of image	171
6.3.1. Main characteristics of optoelectronic imaging sensors	171
6.3.2. Analog-to-digital converter	174
6.3.3. Mass storage device	175
Questions	176
7. Types of aerial and space optical-electronic imaging systems	177
7.1. The principle of imaging with matrix and linear optical-electronic cameras.....	178
7.2. Imaging systems of matrix type.....	180
7.2.1. Optical-electronic camera DMC	180
7.2.2. Optical-electronic camera UltraCam-D	180
7.3. Optical-electronic imaging system of linear type.....	184
7.3.1. Camera ADS 40, ADS 80.....	184
7.3.2. Optical-electronic camera HRSC.....	189
7.3.3. Construction of 3 DAS-1 optical-electronic camera.....	189
7.3.4. Image formation of 3-DAS-1 imaging system.....	192
7.4. Image quality evaluation of optical-electronic systems	196
7.5. Resolution evaluation of optical-electronic systems	198
7.6. Multispectral optical-electronic imaging systems	202

7.7. Hyperspectral aerospace systems	203
7.7.1. Technical specifications of hyperspectral systems	205
7.7.2. Hyperspectral satellite sensor Hyperion.....	206
7.7.3. Hyperspectral satellite sensor CHRIS.....	207
7.7.4. Aircraft hyperspectral sensors	210
7.7.5. Transmission properties of hyperspectral aerospace images	215
Questions	219
8. Imaging systems with nonsimultaneous creation and nonsimultaneous record	
(Scanning)	221
8.1. Optical-mechanical scanning systems.....	221
8.1.1. General scheme of optical-mechanical scanning	221
8.1.2. Multispectral scanners with optical-mechanical scanning method	227
8.2. Infrared imaging system	232
8.2.1. Basic principles of infrared imaging	233
8.2.2. Equipment for infrared imaging.....	235
8.3. Integrated aerial cameras installed on unmanned aerial vehicles.....	244
8.4. Laser imaging systems.....	246
8.4.1. Principles of laser scanning.....	246
8.4.2. Equipment for laser scanning.....	249
8.4.3. Bathymetry.....	256
8.4.4. Peculiarities of laser scanning data processing	262
Questions	266
9. Radiowave imaging system	267
9.1. Microwave radiometers (radio-thermal imaging systems).....	267
9.2. Radar imaging system	271
9.2.1. Principle of image formation of radar imaging systems	271
9.2.2. Side looking radar systems of with real antenna.....	274
9.3. Synthetic aperture radar systems (SAR).....	275
9.3.1. Principles of aperture synthesis.....	276
9.3.2. Interferometry	281
9.3.3. Satellite SAR.....	285
9.3.4. Airborne SAR.....	291
Questions	297
10. Satellite ground receiving station	298
10.1. Structure of satellite ground receiving stations	300
10.2. Technical characteristics of ground receiving stations	305
Perspective directions of development of aerospace imaging systems	306
References.....	309
