

CONTENTS

Foreword	7
Chapter 1. Analysis of the present state and main trends of the computer systems of important objects.....	11
1.1. Methods of construction for security systems of important objects.....	11
1.2. Classification of security sensors.....	14
1.3. Ultrasound security systems	25
1.3.1. <i>Ultrasonic proximity detectors</i>	26
1.4. Methods of measuring the radiation time of ultrasonic signal	32
1.5. Disadvantages of security systems.....	36
Chapter 2. Development of ultrasonic method of security of important objects	39
2.1. Methods to improve the reliability and noise immunity systems of security of important objects.....	39
2.2. Methodology for constructing computer systems of security of important objects.....	44
2.3. Development of ultrasonic method to improve the accuracy of ultrasonic computerized measuring tools for security of important objects	46
2.4. Ways of the ultrasound method of security realization of important objects.....	51
2.5. Analysis of errors of ultrasonic security method	54
2.5.1. <i>Methodical error of measuring</i>	58
2.5.2. <i>Instrumental error of measuring</i>	66
Chapter 3. Ways to improve the metrological characteristics of the system for security of important objects	68
3.1. Selecting ultrasonic transducers.....	68
3.2. Methods of construction transducers of ultrasound impulse signals of time shifts.....	77
3.3. Method of improving the accuracy and noise immunity measuring the time shift between two ultrasonic signals	80

3.4. Analysis of random measurement error time shift of ultrasonic signals	88
---	----

Chapter 4. The results of development and mathematical modeling of computerized measuring tools of accuracy increase.....	90
4.1. Ultrasonic computerized measuring tool.....	90
4.2. Metrological support of CMT.....	96
4.3. Algorithmic and software of CMT.....	101
4.4. Mathematical model of an information channel of ultrasonic security system of important objects	103
4.5. The results of mathematical modeling of computerized measuring tools	106
4.6. Evaluation of the probability of detecting a violation of object	110
Afterword	119
Literature	121
Applications.....	130
