

CONTENTS

<p>PREFACE 10</p> <p>I. MECHANICS 11</p> <p>§1. Velocity and Acceleration.....11</p> <p>§2. Newton's Laws of Motion.....14</p> <p>§3. The Law of Conservation of Momentum.....17</p> <p>§4. Forces of Friction.....18</p> <p>§5. Spring Forces.....20</p> <p>§6. Work Done by a Varying Force21</p> <p>§7. Kinetic Energy of Mechanical System.....23</p> <p>§8. Potential Energy24</p> <p>§9. The Law of Conservation of Energy. Energy Dissipation. Conservation of Energy in General25</p> <p>§10. Angular Velocity and Angular Acceleration26</p> <p>§11. Torque and Angular Momentum of Mechanical System. Moment of Inertia.....28</p> <p>§12. Newton's Second Law for Rotational Motion Rotational Kinetic Energy31</p> <p>§13. The Law of Conservation of Angular Momentum.....33</p> <p>§14. Static Equilibrium.....33</p> <p>§15. The Law of Gravity.....36</p> <p>§16. Gravitational Force and Weight.....38</p> <p>§17. The Gravitational Field40</p> <p>§18. Work done by a Gravitational Force. Gravitational Potential41</p> <p>§19. Simple Harmonic Motion. The Differential Equation of the Simple Harmonic Oscillator43</p> <p>§20. Mass-spring System, Physical, Simple and Torsional Pendulums45</p> <p>§21. Superposition of Vibrations of Equal Frequencies and Traveling in the Same Direction. Beats.....49</p> <p>§22. Superposition of Vibrations Traveling in Perpendicular Direction.....50</p> <p>§23. The Differential Equation of Damped Vibrations.52</p> <p>§24. The Differential Equation of Forced Vibrations. Resonance.53</p> <p>§25. Elastic Waves. Transverse and Longitudinal Waves. The Wave Function.....55</p> <p>§26. Energy of Elastic Waves.....57</p> <p>§27. Interference of Waves59</p>	<p>§28. Ultrasonic Waves and Applications62</p> <p>§29. Equation of Continuity.....63</p> <p>§30. Bernoulli's Equation.....65</p> <p>II. THERMODYNAMICS..... 68</p> <p>§31. Statistics and Thermodynamics Methods. Thermodynamic Variables of the System. Equilibrium State and Processes.68</p> <p>§32. Relationship Between Pressure and Molecular Kinetic Energy71</p> <p>§33. Average Kinetic Energy of the Molecules. Molecular Interpretation of Temperature.73</p> <p>§34. Maxwell-Boltzmann Distribution Function.....73</p> <p>§35. The Exponential Atmosphere. The Boltzmann Distribution Law.....75</p> <p>§36. Theorem of Equipartition of Energy77</p> <p>§37. Internal Energy79</p> <p>§38. Work and Heat.80</p> <p>§39. The First Law of Thermodynamics.....82</p> <p>§40. Heat Capacity.83</p> <p>§41. Entropy85</p> <p>§42. Entropy and Probability86</p> <p>§43. Some Applications of the First Law of Thermodynamics to Isoprocesses.88</p> <p>§44. Adiabatic Process.....90</p> <p>§45. The Number of Collisions per Unit Time and Mean Free Path92</p> <p>§46. Steady Self-Diffusion in Gases.....94</p> <p>§47. Thermal Conductivity of Gases96</p> <p>§48. The Internal Friction in Gases.....98</p> <p>§49. The Cyclic Processes. Heat Pumps and Refrigerators.....100</p> <p>§50. The Carnot Cycle and Efficiency of the Carnot Engine102</p> <p>§51. The Properties of the Reversible and Irreversible Processes.....104</p> <p>§52. The Second and Third Laws of Thermodynamics106</p> <p>§53. Real Gases. Van der Waals' Equation of State108</p> <p>§54. Isotherms for a Real Gas. Critical State.....110</p> <p>§55. The Internal Energy of the Real Gas113</p> <p>§56. General Characteristic of Liquids114</p> <p>§57. Viscosity of Liquids116</p>
--	--

§58. Evaporation and Boiling of Liquids.....	118	§85. Self-inductance. Inductance.	183
§59. Humidity of Air	121	§86. Energy of the Magnetic Field.....	185
§60. General Characteristic of Solids.....	123	§87. RLC circuit.	186
§61. Types of Deformation of Solids.....	125	§88. Maxwell's Equations for Electromagnetic Field	188
§62. Thermal Expansion of Solids.....	128	§89. Properties of the Electromagnetic Waves..	191
§63. Alloys.....	132	§90. The Electromagnetic Waves Energy. The Energy Flux. Poynting Vector.....	193
III. ELECTROSTATICS	134	VI. OPTICS	195
§64. Properties of Electric Charges. The Electric Field. The Electric Field Intensity.....	134	§91. Laws of Geometric Optics. Fermat's Principle.....	195
§65. Work Required to Bring an Electric Charge. Electric Field Potential. Electric Field as Gradient of Potential.	136	§92. Reflection and Refraction of Light. Total Internal Reflection. Prisms.....	196
§66. Electric Flux. Gauss's Law.	140	§93. Lens makers' equation.....	199
§67. Types of Insulators. Electric Field in Dielectrics.	141	§94. Images Formed by Flat and Spherical Mirrors.....	205
§68. Conductors.....	146	§95. Lens Aberrations	207
§69. Capacitance of an Isolated Conductor. Capacitors.....	147	§96. Simple Optical Devices and Systems.....	209
§70. Energy Stored in a Charged Isolated Conductor, Capacitor. Energy of Electrostatic Field.....	151	§97. Introduction to Photometry	211
IV. DIRECT ELECTRIC CURRENT ...	153	§98. Interference of Light Waves.	213
§71. Electric Current and Current Density.....	153	§99. Interference Pattern from Two Coherent Sources	216
§72. Electromotive Force and Voltage.	154	§100. Interference in Thin Films.	218
§73. The Laws of Direct Current	155	§ 101. Applications of Interference.....	223
§74. Work Done by a Current. Power. Joule-Lenz Law.	157	§102. Diffraction of Light	226
§75. Kirchhoff's Rules	158	§103. X-ray Diffraction	231
§76. The Work Function. Thermoelectric Effects.....	159	§104. Dispersion of light. Normal and Anomalous Dispersion.....	231
§77. Electric Current in Gases.....	163	§105. Phase and Group Velocity of Light	234
V. ELECTROMAGNETISM	167	§106. Absorption of Light.....	235
§78. The Magnetic Field. Magnetic Induction. The Biot-Savart Law	167	§107. Natural and Polarized Light.	237
§79. Ampere's Circuital Law.....	169	§108. Birefringency	240
§80. Magnetic Flux. Gauss's Law in Magnetism.....	172	§109. Artificial Optical Anisotropy	243
§81. Ampere's Law. Work Required to Bring a Conductor in Magnetic Field.	172	§110. Optical Activity	245
§82. Lorentz Force. The Hall Effect	173	§111. Doppler Effect	248
§83. Magnetism in Matter. Diamagnetic, Paramagnetic and Ferromagnetic Materials.	175	VII. QUANTUM NATURE OF RADIATION.....	250
§84. Electromagnetic Induction. Lenz's Law. Faraday's Law of Induction.....	181	§112. Thermal Radiation. Kirchhoff's Law of Thermal Radiation	250
		§113. Stefan's Law. Wien's Displacement Law. Rayleigh-Jeans Law	253
		§114. Quantum Hypothesis and Planck's Law.....	257

§115. Photoelectric Effect. Einstein	
Photoelectric Effect Equation.....	258
§116. Luminescence of Solids.....	262
VIII. ATOMIC PHYSICS	265
§117. The Bohr Theory of Hydrogen	
Atom and its Spectrum	265
§118. Introduction to Quantum Mechanics.....	267
§119. The Quantum Mechanical Treatment	
of Hydrogen Atom.....	271
§120. Electron Spin. The Pauli Exclusion	
Principle.....	273
§121. Lasers.....	275
IX. NUCLEAR PHYSICS	280
§122. Size, Structure and Charge of Nuclei. The	
Mass Number and Atomic Number.....	280

§123. The Mass Defect and the Binding	
Energy of the Nucleus	282
§124. Nucleons. Nuclear Forces.....	284
§125. Radioactivity. Radioactive	
Decay Law.....	287
§126. The Decay Processes	289
X. INTRODUCTION TO SOLID	
STATE PHYSICS	293
§127. Band Theory of Solids. Metals,	
Insulators, Semiconductors.....	293
§128. Intrinsic Conductivity	
of Semiconductors	296
§129. Doped conductivity of	
semiconductors	298
§130. The p-n junction and diode	301
LITERATURE	307
