

C O N T E N T S

CHAPTER I. First-order differential equations	11
§1. Basic definitions	11
Examples of problems solving	12
Problems for solving	16
§2. Geometrical interpretation of first-order differential equation	19
Examples of problems solving	20
Problems for solving	21
§3. Separable differential equations	22
Examples of problems solving	23
Problems for solving	27
§4. Differential equations with homogeneous right side	28
Examples of problems solving	30
Problems for solving	36
§5. Linear differential equations and Bernoulli's equations	37
Examples of problems solving	39
Problems for solving	44
§6. Exact differential equations	45
Examples of problems solving	46
Problems for solving	53
§7. Different kinds of first-order differential equations	56
Problems for solving	57
§8. Lagrangian's equations and Clairaut's equations	59
Examples of problems solving	60
Problems for solving	62
CHAPTER II. Higher-order differential equations	63
§9. Higher-order differential equations whose order can be reduced	63
Examples of problems solving	65
Problems for solving	70
§10. Reduction of order of linear differential equations	71
Examples of problems solving	71
Problems for solving	75
§11. Elementary theory of linear n -th order differential equations	76
Examples of problems solving	78
Problems for solving	84

§12. Linear homogeneous differential equations with constant coefficients	86
Examples of problems solving	87
Problems for solving	91
§13. Linear nonhomogeneous differential equations. Method of variation of parameters and Cauchy's method	92
Examples of problems solving	95
Problems for solving	99
§14. Method of undetermined coefficients in solving linear nonhomogeneous differential equations with constant coefficients	101
Examples of problems solving	102
Problems for solving	106
§15. Euler's equations and Lagrangian's equations	108
Examples of problems solving	110
Problems for solving	112
§16. Geometrical problems leading to equations	112
Examples of problems solving	113
Problems for solving	116
§17. Physical problems leading to differential equations	123
Examples of problems solving	124
Problems for solving	135
CHAPTER III. Systems of ordinary differential equations	141
§18. Normal systems	141
Examples of problems solving	143
Problems for solving	147
§19. Systems of linear differential equations	149
Examples of problems solving	151
§20. Systems of linear differential equations with constant coefficients	155
Examples of problems solving	157
Problems for solving	173
§21. Systems of linear differential equations with piecewise constant coefficients	178
Examples of problems solving	180
Problems for solving	184
CHAPTER IV. Elements of stability theory	186
§22. Basic definitions of stability theory	186
Examples of problems solving	187
Problems for solving	189

§23. Simplest kinds of stationary points	190
Examples of problems solving	193
Problems for solving	194
§24. First-approximation stability	196
Examples of problems solving	198
Problems for solving	202
§25. Conditions under which real parts of roots of polynomials with real coefficients are not negative	204
Examples of problems solving	205
Problems for solving	207
§26. Method of Lyapunov's functions	208
Examples of problems solving	210
Problems for solving	214
ANSWERS TO EXERCISES	216
REFERENCES	239
