

TABLE OF CONTENTS

LIST OF ABBREVIATIONS	10
INTRODUCTION	13
CHAPTER 1. HISTORY OF RESEARCH ON the UAS «Academic Vernadsky»	17
CHAPTER 2. Geotectonics of Western Antarctica	28
2.1. Structure of geophysical fields as displaying buildings and evolution of Antarctic tectonosphere	28
2.2. Geological background for the region of Ukrainian Antarctic station «Akademic Vernadsky»	40
2.3. Results of paleomagnetic studies.....	45
2.4. Tectonic evolution of Eastern and Western Antarctic from paleomagnetic data.....	60
CHAPTER 3. COMPREHENSIVE GEOPHYSICAL AND PETROLOGICAL MODELS FOR DEEP STRUCTURE OF THE ANTARCTIC PENINSULA CONTINENTAL MARGIN	67
3.1. Anomalies of potential fields (gravity and magnetic) and seismic data	68
3.2. Parameterization of lithosphere models according to petrophysical properties of rocks	75
3.3. Models for the crust and upper mantle of the western segment of Antarctic Peninsula	78
3.4. Petrological model and interpretation of the results in the context of the evolutionary model of the region.....	87
3.5. The method of gravitational tomography and deep structure of the Antarctic	95
CHAPTER 4. WEST ANTARCTIC – POLYGON FOR NEW GEOPHYSICAL TECHNOLOGIES APPROBATION OF DEEP EARTH STRUCTURE STUDYING AND FOR MINERALS SEARCHING	116
4.1. General characteristics of geoelectric studies in West Antarctica in the 17th Ukrainian Antarctic expedition	119
4.2. Geoelectric investigation of the hydrocarbon potential within the structures of continental margin of the Antarctic Peninsula	129
CHAPTER 5. MODERN GEODYNAMICS OF ANTARCTIC TECTONIC PLATES ACCORDING TO RESULTS OF GNSS-MEASUREMENTS	142
5.1. Main areas of geodynamic researches in Antarctica	142
5.2. Irregularity of rotational motion of the Earth and Antarctic tectonic plate.....	145
5.3. The calculation of rotational parameters and displacements of Antarctic tectonic plates caused by influence of the internal and external forces components	159
5.4. Geological interpretation of kinematics of Antarctic lithospheric plates and reconstruction of deep geodynamic processes	166
5.5. Regional geodynamic researches on the Antarctic Peninsula area	169
5.6. Local researches of tectonic fault of Penola Strait (Argentine islands archipelago)	172
5.7. Determining the surface volume of island glaciers of Argentine archipelago	178
5.8. Creating large-scale plans for UAS region.....	186

CHAPTER 6. RECENT GEODYNAMICS OF THE WESTERN SLOPE OF ANTARCTIC PENINSULA IN THE UAS «AKADEMIC VERNADSKY» LOCATION ON THE BASE OF TECTONOMAGNETIC INVESTIGATIONS DATA	193
6.1. Reasoning of tectonomagnetic investigations and research methodic	195
6.2. Dynamics of a local magnetic field on the Antarctic tectonomagnetic polygon	199
6.3. Relations of local magnetic field temporal variations and recent Earth's crust geodynamics	203
CHAPTER 7. SPACE-TIME STRUCTURE AND DYNAMICS OF ALTERNATING MAGNETIC FIELDS OF INTERNAL AND EXTERNAL SOURCES IN ANTARCTICA	213
7.1. Geomagnetic field variations of internal sources	213
7.2. Geomagnetic field variations of external sources	226
CHAPTER 8. ELECTROMAGNETIC SIGNATURES OF GEOPHYSICAL FIELDS IN ANTARCTICA: MAGNETOSPHERE-IONOSPHERE INTERACTION	235
8.1. Data recording and processing techniques	237
8.2. Schumann resonances	238
8.3. Ionospheric Alfvén resonances	249
8.4. Magnetospheric resonances	257
8.5. Technogenic signals	260
CHAPTER 9. DYNAMICS OF NEUTRAL ATMOSPHERE AND GEOSPACE PLASMA: TROPOSPHERE-IONOSPHERE INTERACTION	267
9.1. Background variations of ionospheric parameters	268
9.2. Signatures of tropospheric disturbances at the heights of ionospheric E region	269
9.3. Sporadic E layers and their dependence on tropospheric conditions	272
9.4. Plasma irregularities of F region caused by influence of neutral atmosphere.....	274
9.5. Ozone layer as a shield of the interaction between atmosphere and space weather systems	277
9.6. Simulation of the effects of troposphere-ionosphere interaction	281
CHAPTER 10. INSTRUMENTATION FOR THE STUDY OF THE ALTERNATIVE GEOPHYSICAL FIELDS.....	287
CONCLUSIONS	303
REFERENCES	313
