<b>1. The basics of logic</b>	<b>7</b>
1.1 Main definitions . . . . .	7
1.2 Mathematical proofs . . . . .	17
1.3 Theory of sets . . . . .	24
1.4 Operations on sets . . . . .	29
1.5 Cartesian product of sets . . . . .	32
<b>2. Numerical sets</b>	<b>37</b>
2.1 Sets of natural and integer numbers . . . . .	37
2.2 Rational numbers . . . . .	47
2.3 Irrational numbers . . . . .	56
2.4 Set of real numbers . . . . .	61
2.5 Subsets of set of real numbers . . . . .	70
2.6 Bounds of numerical sets . . . . .	75
2.7 Archimedean property . . . . .	79
2.8 Absolute value . . . . .	82
2.9 Metric of the set of real numbers . . . . .	83
2.10 Principle of induction . . . . .	86
<b>3. Complex numbers</b>	<b>91</b>
3.1 Definition of complex numbers . . . . .	92
3.2 Geometrical presentation of complex numbers . . . . .	93
3.3 Arithmetic operations on complex numbers . . . . .	94
3.4 Trigonometric form of complex number . . . . .	99
3.5 Operations on complex numbers . . . . .	102
3.6 The power of complex number . . . . .	103
3.7 The $n$ -th root of complex number . . . . .	105
3.8 The $n$ -th root of unity . . . . .	106
3.9 Exponential form of complex number . . . . .	111
3.10 Riemann sphere . . . . .	114

<b>4. Numerical sequences</b>	<b>121</b>
4.1 Sequences of real numbers . . . . .	121
4.2 Some important types of numerical sequences . . .	128
4.3 The limit of a numerical sequence . . . . .	134
4.4 Cauchy criterion of convergence of sequence . . . .	137
4.5 Properties of the convergent sequences . . . . .	139
4.6 Monotonic sequences . . . . .	146
4.7 Stoltz theorems . . . . .	151
4.8 Euler number and related to it limits . . . . .	154
4.9 Investigation of recurrent sequences . . . . .	163
