

# Contents

<b>Introduction</b> .....	5
<b>Chapter I. Perceptron</b> .....	9
1.1. Rosenblatt's perceptron.....	9
1.2. Multilayer perceptron.....	29
1.3. Perceptron learning rule .....	50
1.4. Backpropagation .....	79
<b>Chapter II. Machine Learning</b> .....	91
2.1. Supervised Hebbian Learning .....	91
2.2. Widrow-Hof Learning.....	114
2.3. Associative Learning.....	131
2.4. Hybridization of the SGTm neural-like structure through Inputs polynomial extension.....	145
2.5. Model and Principles for the Implementation of Neural-Like Structures based on Geometric Data Transformations .....	153
2.6. Exercises .....	161
<b>Chapter III. Competitive Neural Networks</b> .....	166
3.1. Self-organizing map.....	166
3.2. Adaptive Resonance Theory .....	173
3.3. A model of analogue k -winners-take-all neural circuit.....	184
3.4. A discrete-time dynamic k-Winners Take-All neural circuit.....	199
3.5. Exercises .....	226
<b>Chapter IV. Dynamic Networks</b> .....	232
4.1. Dynamic Programming .....	232
4.2. Bellman's optimality criterion .....	233
4.3. Policy iteration .....	237
4.4. Value iteration.....	240
4.5. Exercises .....	245
<b>Chapter V. Applications of Neural Networks</b> .....	249
5.1. Case study 3: pattern recognition .....	249
5.2. Case study 4: clustering .....	255
5.3. Case study 5: prediction.....	259
5.4. Development of the non-iterative supervised learning predictor based on the Ito decomposition and SGTm neural-like structure for managing medical insurance costs.....	265
5.5. A Neural Circuit Model of Tracking Control for Continuous-Time Nonlinear Systems .....	274
5.6. Exercises .....	284
References .....	288
Index .....	289
