Introduction	7
Designations	8
1. General information on the creation of a nonlinear deformation model	11
1.1. Prerequisites for the creation of a nonlinear deformation model	11
1.2. Experimental bases of application of diagrams of physical condition of concrete	11
1.3. Basic approximations of the diagram $\sigma_c - \varepsilon_c$ of the physical state of concrete	15
1.4. Directions of solving the problem of determining the limit values of deformation of concrete	16
2. General principles of calculation	18
2.1. Principles of calculations by the limit states of the first group	18
2.2. Prerequisites for calculations.....	19
2.3. Dependence of stress-deformation of concrete in calculations of structures	20
2.4. Simplified stress-deformation dependences of concrete in calculations of structures.....	21
2.5. Calculation diagram of deformation of reinforcement.....	23
3. Characteristics of materials	25
3.1. Characteristics of concrete	25
3.2. Types of reinforcement for reinforced concrete structures.....	27
3.3. Characteristics of reinforcement.....	28
3.4. Cross-section parameters	29
4. Calculation of the area of longitudinal reinforcement in the bending elements of concrete and reinforced concrete structures	31
4.1. Basic dependencies on calculation (first task).....	31
4.2. Condition of the need for reinforcement of the compressed zone cross section.....	38
4.3. Algorithm for calculating the area of reinforcement in the cross section.....	39
4.4. Examples of calculation of the area of longitudinal reinforcement	40
5. Calculation of the strength of the normal cross sections of the bending elements of concrete and reinforced concrete structures	44
5.1. Basic dependencies on strength calculation (second task)	44
5.2. Condition of the destruction of the element for reinforcement.....	50
5.3. Algorithm for calculating the strength of normal cross sections	51
5.4. Examples of calculation of the strength of normal cross sections	52
5.5. Examples of calculations of the strength of normal cross sections of bent elements, using parameters $\bar{\alpha}_m, \bar{\xi}, \bar{\zeta}$ using tables.....	55
6. Calculation of the strength of normal sections by method [80] and using parameters $\bar{\alpha}_m, \bar{\xi}, \bar{\zeta}$ using tables	63
6.1. Cases of reinforcement of normal cross sections.....	63

6.2. Determination of the area of tensile reinforcement in bending rectangular elements with single reinforcement.....	64
6.3. Determination of the area of tensiled and compressed reinforcement in bending elements with double reinforcement	66
6.4. Calculation of normal cross-sections of bent elements with a flange in compressed zone	69
6.4.1. Determination of the position of the neutral axis in the elements of the T– profile	71
6.4.2. Determination of the area of the stretched reinforcement in the T-Profile elements at $x > h_f$	72
6.5. Determination of the bearing capacity of normal cross sections	75
6.5.1. Determination of the bearing capacity of normal cross sections of rectangular profile elements at $x \leq x_R$ and the T-profile with the flange in the compressed zone at $x \leq h_f$ by the traditional method.....	76
6.5.2. The bearing capacity of normal cross sections of the elements of the T-profile at $x > h_f$ and at $A'_s = 0$	78
6.5.3. Bearing ability of normal cross sections of rectangular profile with design reinforcement in compressed zone ($\xi > \xi_R$)	80
7. Calculation of the transverse force of the cross sections sloped to the longitudinal axis of the bent elements	84
7.1. Types of transverse reinforcement	84
7.2. The general sequence of calculations of sloping cross sections	85
7.3. Determination of the area of transverse vertical reinforcement using a frame model.....	86
7.4. Shear calculation of cross sections, reinforced with vertical and sloped transverse reinforcement.....	91
8. Construction of cross sections of reinforced concrete elements	99
8.1. Construction of normal cross-sections.....	99
8.2. Construction of sloping cross-sections	101
Literature.....	104
Addition A. Tables of values of parameters and characteristics used in calculations.....	111
